### GENERATE THREE ADDRESS CODES

# AIM:

To generate three address code using C program.

#### **ALGORITHM:**

- Get address code sequence.
- Determine current location of 3 using address (for 1st operand).
- If the current location does not already exist, generate move (B, O).
- Update address of A (for 2nd operand).
- If the current value of B and () is null, exist.
- If they generate operator () A, 3 ADPR.
- Store the move instruction in memory.

### PROGRAM:

```
#include<stdio.h>
#include<string.h>
#include<stdlib.h>
void pm();
void plus();
void divi();
int i,ch,j,l,addr=100;

   char *p1, *p2;
   if (! str || ! *str)
       return str;
   for (p1 = str, p2 = str + strlen(str) - 1; p2 > p1; ++p1, --p2)
       *p1 ^= *p2;
       *p2 ^= *p1;
       *p1 ^= *p2:
   return str;

1.assignment
2.arithmetic
3.relational
4.Exit
Enter the choice:1
Enter the expression with assignment operator:a=b+c
Three address code:
temp=b+c
a=temp
1.assignment
2.arithmetic
3.relational
4.Exit
Enter the choice:4
```

## **RESULT:**

Thus, three address code is generated using C program.
